

PMS RentalReady Releases 01.2026 (January)

General

New Language Support Added

Support for new languages has been added across RentalReady: Polish, German, Dutch

Please note:

The Agent Mobile App, Staff Mobile App, and Owner Mobile App are not yet available in the new languages. Support for these mobile apps will be released in the coming weeks.

Index Page

Fixed some bugs related to time zone issues on the homepage reservation list

In the past, we used UTC to get "today" and then compared it to fields using the property timezone (for cancellation, departure, etc). Now, we calculate the property's "today" for the comparison.

The screenshot shows a dashboard header with four summary items: "103 arrivals in the next 3 days", "222 departures in the next 3 days", "0 new reservations in the last 3 days", and "0 cancellations in the last 3 days". Below this is a table with the following data:

RESERVATION ID	GUEST NAME	RESERVATION DATES	PROPERTY	ARRIVAL TIME
1745678	John Doe	07/01/2026 - 12/01/2026	72433 - Z JDA3D	3 p.m.
2098283	John Doe	07/01/2026 - 12/01/2026	67959 - 340. LE BLACK	3 p.m.
2055775	John Doe	07/01/2026 - 10/01/2026	83277 - Vanzeleres 285 - Quarto 001	3 p.m.
2082746	John Doe	07/01/2026 - 26/01/2026	83205 - 233. BONPAIN	3 p.m.

Search Bar

Fix on RentalReady search

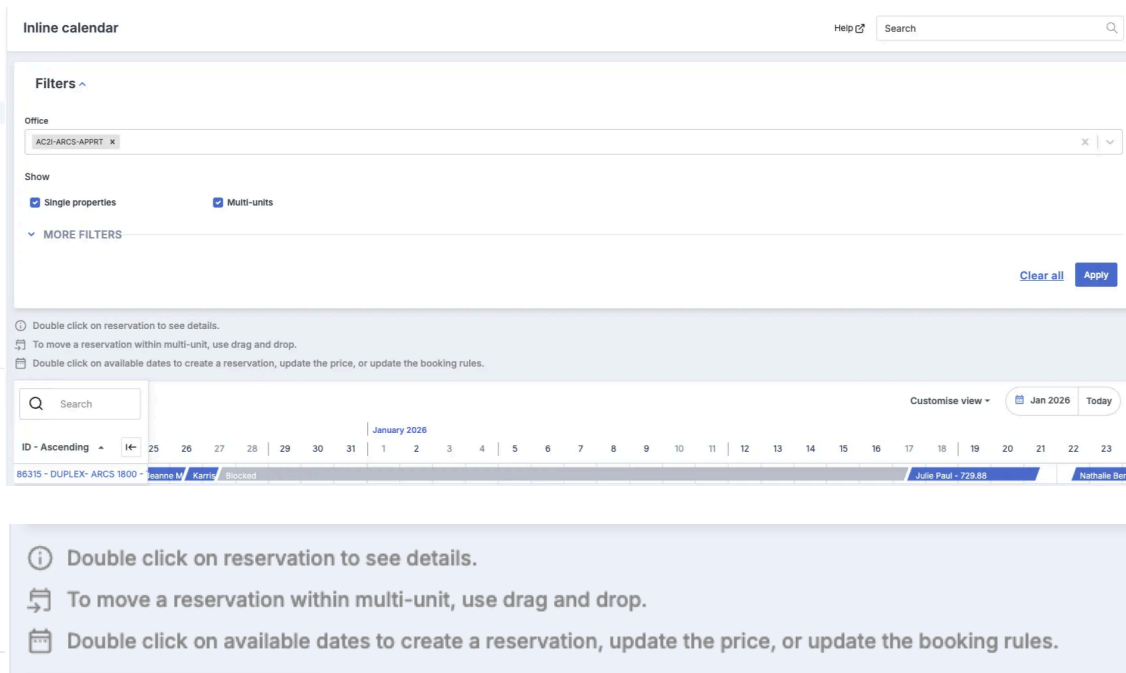

We have fixed a bug with the RentalReady search bar which sometimes prevented selecting an option from the list of search results. This fix also applies to the search in the RentalReady mobile app.

Inline Calendar

New Help Text for Inline Calendar Actions

What's changed:

- We added a new help text to better explain inline calendar interactions in RentalReady. The help text now describes what happens when you double-click on available dates, including creating a reservation, updating the price, or updating booking rules.

Property

1. Improved access to Premium Class & Quality Warning

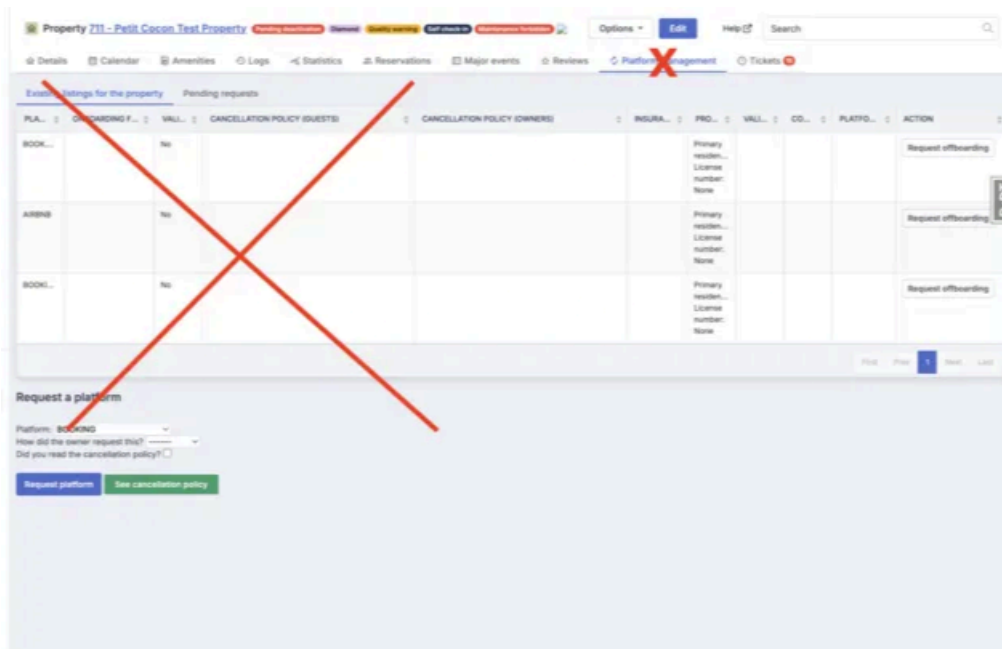

You can now adjust Premium Class and Quality Warning from any tab on the property page.

Previously, these settings were only available in the Details tab.

Now, they're accessible in whatever tab you are on the property page, making updates faster and more convenient.

2. Removal of "Platform management"

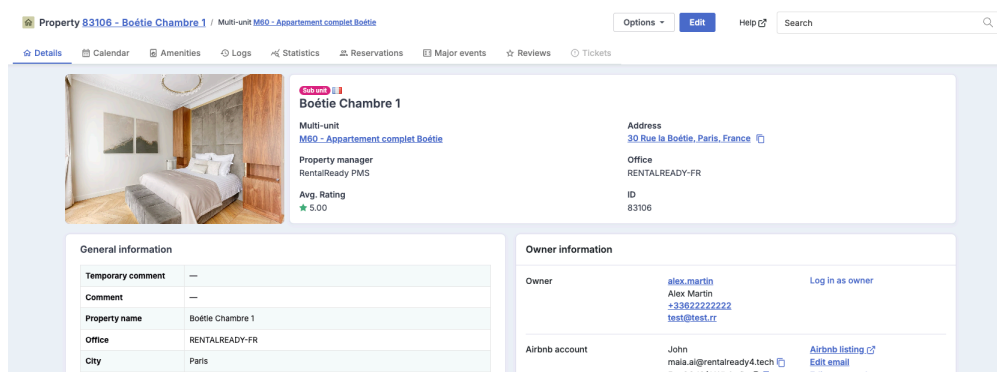

We have removed the deprecated section "Platform management" from the property page.

3. Property Address Improvements

What's changed:

- The property address is now clickable and opens the location in Google Maps in a new tab (this works for multi-unit properties as well)
- Added a Copy button that copies the property address
- Removed the extra Google Maps link from the property Information section

Agent

1. Agent space bug fixes

On the available missions page, we don't show missions if they overlap with any missions currently assigned to the agent, and `allow_overlapping_mission_assignment` is False on the office level. However, in the methods used to display the number of available missions, we didn't have the same logic, so we fixed them.

We added the same logic in the agent's available extra missions page

7 MISSIONS for today

14 MISSIONS in the next 4 days

CLEANING MISSIONS There are 5 available missions

2. Agent Access to Ticket Details

What's changed:

- Added a new agent-level permission: "Can see ticket details page" (disabled by default), available on agent creation and edit forms
- Agents can now access the ticket details page when this permission is enabled
- Ticket IDs in agent mission views are now clickable links when the permission is enabled (plain text otherwise)
- All links (action buttons as well) on the ticket details page are disabled for agents, except for the Files gallery
- No changes for support users — existing behavior remains the same

This update applies to the agent mobile app as well.

Permissions

Agent space

- ☐ Can see inline calendar
Only available on Desktop app.
- ☐ Can see ticket details page
- ☐ Can see all mission dashboards
Only available on Desktop app. Check-in & check-out dashboard, Cleaning dashboard, Extra mission dashboard.
- ☒ Can postpone missions to tomorrow in the dashboards
Only available in the dashboards.
- ☒ Display invoices and monthly summary section in agent space
- ☒ Can unassign themselves from missions
- ☐ Can see missions on Premium properties
- ☐ Agent can see reservation net earnings
If enabled, agent will be able to view net earnings on the global calendar

Guest Space

Check-out Instructions Visibility Restricted

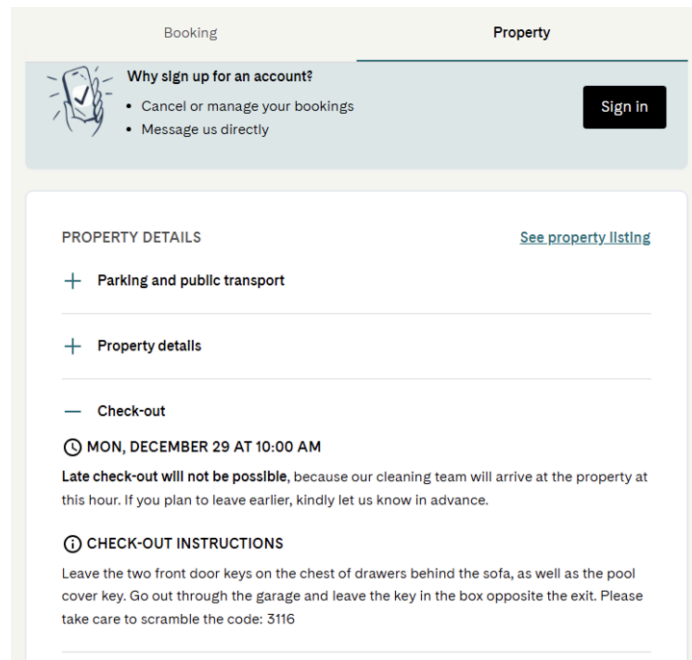

What's new:

- The "Check-out instructions" section in the guest space is now hidden when a reservation is not ready for check-in.

This section will only be visible for:

- Reservations that are ready for check-in
- Ongoing stays
- Reservations with a check-out-related status (until the end of the check-out date)

This change ensures that sensitive information (such as property access codes) is not exposed too early.

Mailbox

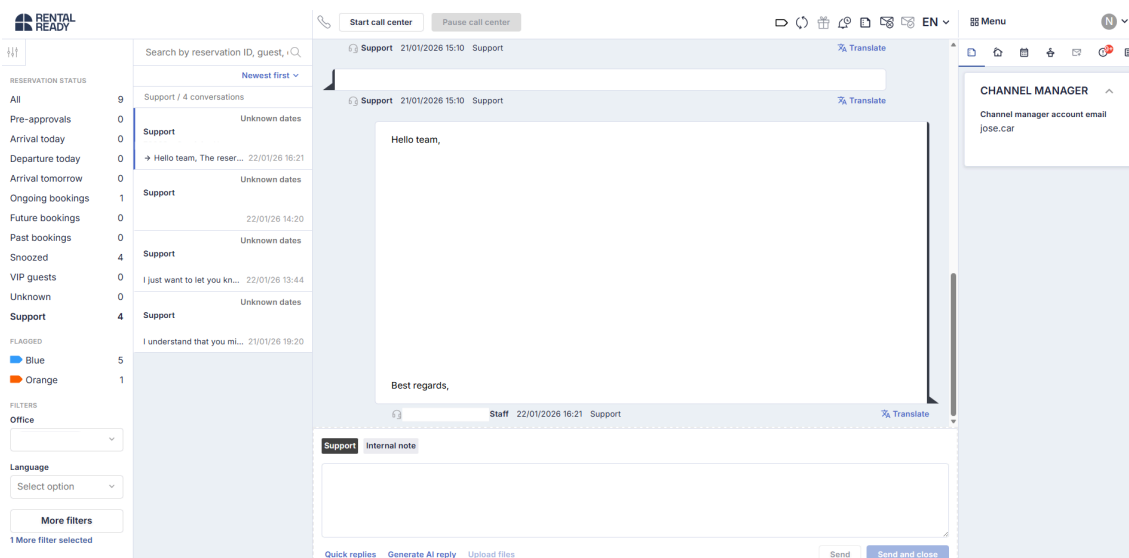

1. Login form now hidden for the already logged-in users

If the user is already logged into RentalReady and opens the mailbox link (from a computer or mobile app), the login form will not appear anymore.

2. Airbnb support messages are now visible in the Mailbox.

A new conversation category called *Support* has been added, where users can read and reply to Airbnb support conversations.

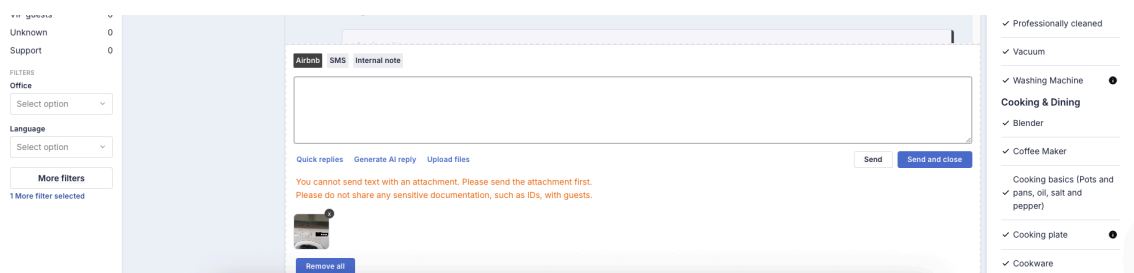

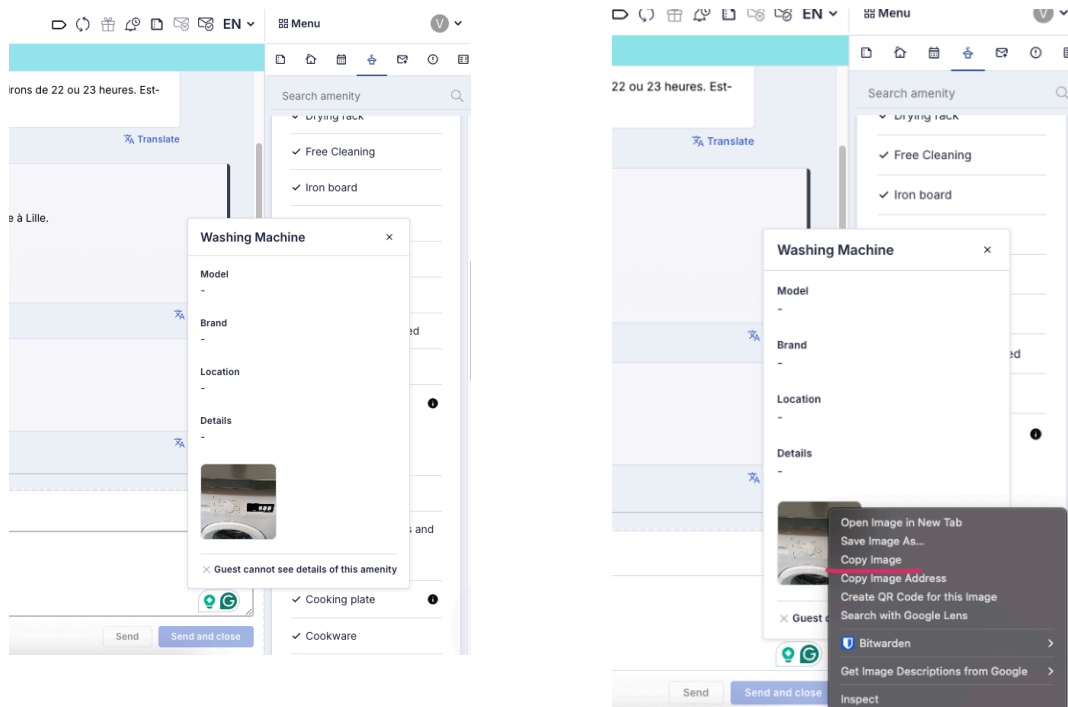

In the *Overview* tab, the channel manager account email linked to the conversation is displayed.

3. Amenity Media Preview in Mailbox

What's changed:

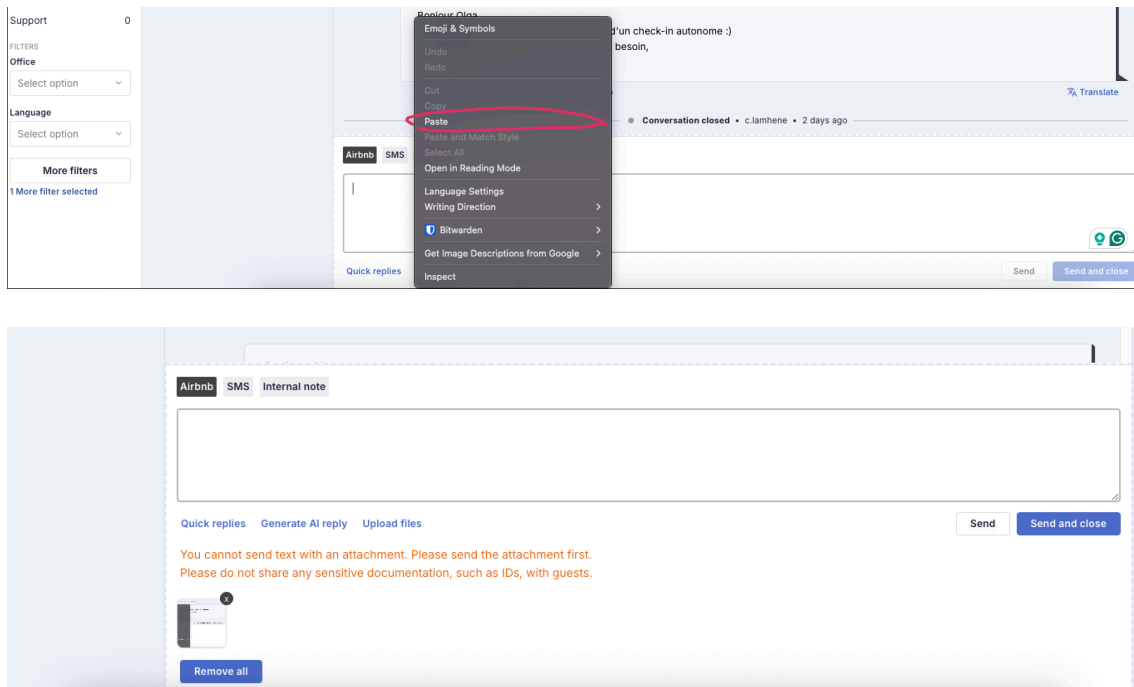

- In the Mailbox, the Amenity tab now shows not only the amenity description, but also a preview of any attached media.
- You can copy this media and paste it directly into the message input area—for example, using the mouse menu or clipboard.

4. Paste Features into Message Box

What's changed:

- You can now paste content directly into the message input area in the Mailbox.
- You can paste content such as, for example, screenshots copied from ClickBoard or using the mouse menu.
- Images are instantly added to your message without any extra steps.

2. Reservation *not paid* banner for Expedia reservations in Mailbox was fixed

The warning banner *The reservation is not paid or fully paid* was fixed for the Expedia reservations, where it was shown even if the reservation was actually paid by the guest!

HomeReady

Owner Ticket Resolution Toggle

We've added a new toggle option when creating or editing tickets: "Owner takes care of ticket resolution". This allows you to mark when an owner is handling the resolution of a ticket.

Visual Alert on Ticket Detail Page

- When this toggle is enabled, a warning alert appears at the top of the ticket detail page
- This makes it immediately clear that the owner is handling the resolution

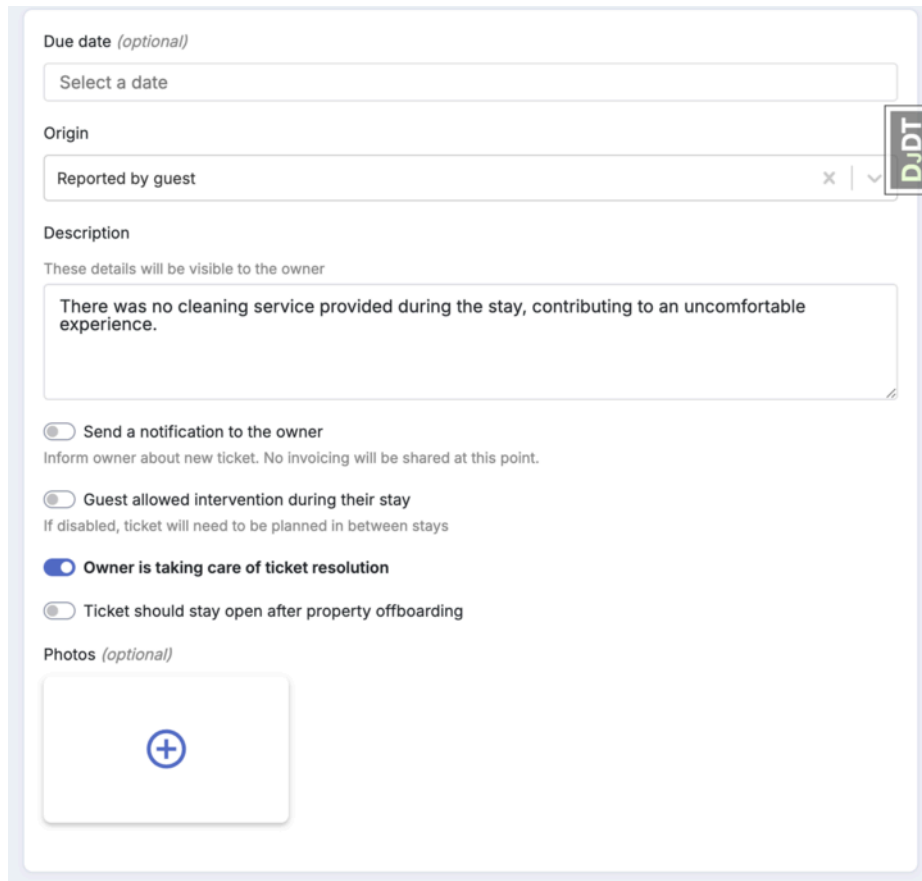

Filter by Owner Resolution

- You can now filter tickets in the issue list by whether the owner is taking care of resolution
- Use the "Owner takes care of ticket resolution" filter with Yes/No options

Frontend Improvements:

We've also made some improvements to the ticket creation and editing forms:

- Updated toggle labels for better clarity
- Improved form field ordering and layout
- Enhanced help text for better guidance

The screenshot shows a ticket creation form with the following sections:

- Due date (optional)**: A date picker field with the placeholder text "Select a date".
- Origin**: A dropdown menu showing "Reported by guest" with a close (x) and expand (v) icon. A "DJD" badge is visible on the right.
- Description**: A text area with the placeholder text "These details will be visible to the owner". The description entered is "There was no cleaning service provided during the stay, contributing to an uncomfortable experience."
- Toggles**: Four toggle switches with labels and help text:
 - ☐ **Send a notification to the owner**
Inform owner about new ticket. No invoicing will be shared at this point.
 - ☐ **Guest allowed intervention during their stay**
If disabled, ticket will need to be planned in between stays
 - ☒ **Owner is taking care of ticket resolution**
 - ☐ **Ticket should stay open after property offboarding**
- Photos (optional)**: A button with a blue plus sign (+) to add photos.

Missions

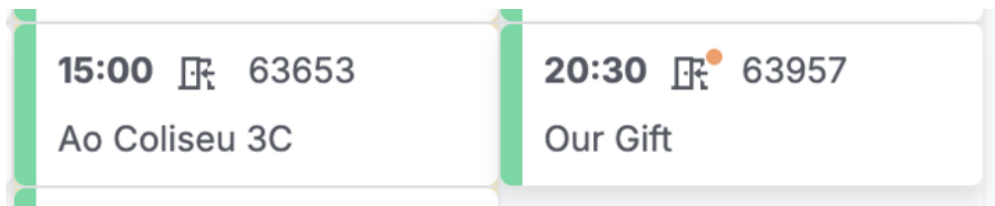

1. Checklist results index - the logic for mission display has been updated

Before: We displayed only the checklists that had previously been opened or started by an agent or staff user.

Now: We display all checklists associated with any created missions, including those that have not yet been opened or filled in by an agent.

2. Weekly mission view - Fixed a bug about the warning badge.

When there is a warning or error in a mission, we display the warning badge. The badge was desynchronized and sometimes was missing or falsely displayed. We synchronized the badge with all warnings. It should now work correctly.

3. Revamp the Weekly mission view filters.

We revamped the weekly mission view filters and we added the Hide self check - in missions filter.

Finance

1. Financial transactions – Agent split transaction now available

Before: The agent split was added recently. However, the financial transaction linked to that split was not available in the financial transaction page.

Now: Agent splits are finally visible and easy to access in the RentalReady financial transactions table

- Each agent split now has its own clear line in the financial transactions table
- New filters options
 - updated payout destination filter (agents + agencies)
 - a new dedicated agent filter
- Direct link from the reservation page to the agent's virtual transaction is available

Migration

- All payout lines were generated for past agent splits.

New

Reservation

1. Create Reservation Page Updates

We've improved the create reservation page with better validation, clearer form fields, and a more intuitive guest information section.

What's New:

Fixed Hidden Validation Errors

- Fixed an issue where hidden validation errors blocked form submission without showing an error message
- Validation errors now appear only on visible fields

Returning Guest Toggle

- "Returning guest" toggle replaces the yes/no radio buttons
- Defaults to OFF (inactive)
- When ON, the "Guest email" field is required (red asterisk) and shows validation errors if empty
- When OFF, the regular "Email" field is required

Form Defaults

- Number of Children, Infants, and Pets now default to 0

Improved Validation Styling

- "Guest email" and "Reservation platform" fields show a red border when invalid
- Error styling matches other form fields for consistency

Frontend Improvements:

We've also made some improvements to the create reservation page:

- Success page headline updated from "Successfully created" to "Create new reservation"
- Better visual feedback for form validation errors

The image displays two screenshots of the 'Create new reservation' form. The top screenshot shows the form with various fields and error messages. The bottom screenshot shows the same form with red arrows pointing to the 'Returning guest' checkbox and the 'Reservation platform' dropdown.

2. Add a new option to display Reservation financials VAT-excluded

Financial amounts on the Reservation detail page now respect the Financials display setting configured at the office level

Three display modes:

- GROSS (VAT included): Shows amounts with VAT included - default behavior
- NET (VAT excluded): Shows amounts with VAT excluded
- NET_VAT (Net and VAT amounts): Shows both net amounts and VAT amounts separately

Important notes

- VAT calculations use the appropriate VAT rate for each financial item type
- The current UI implementation may not be ideal. The Reservation page, Finance section will be revamped in Q2 2026 to improve the user experience

Artificial Intelligence

1. Auto-reply to guest reviews layout updated

The Auto-reply to guest reviews configuration list layout has been updated to be consistent with the other AI configuration list layouts (Mailbox assistant and Ticket assistant)

2. Maia is now defaulting to European Portuguese

- When the guest message arrives in the mailbox, Maia tries to detect which language the message is written in and responds in that language
- Previously, if Maia detected that the guest message is in Portuguese, she would sometimes default to replying in Brazillian Portuguese

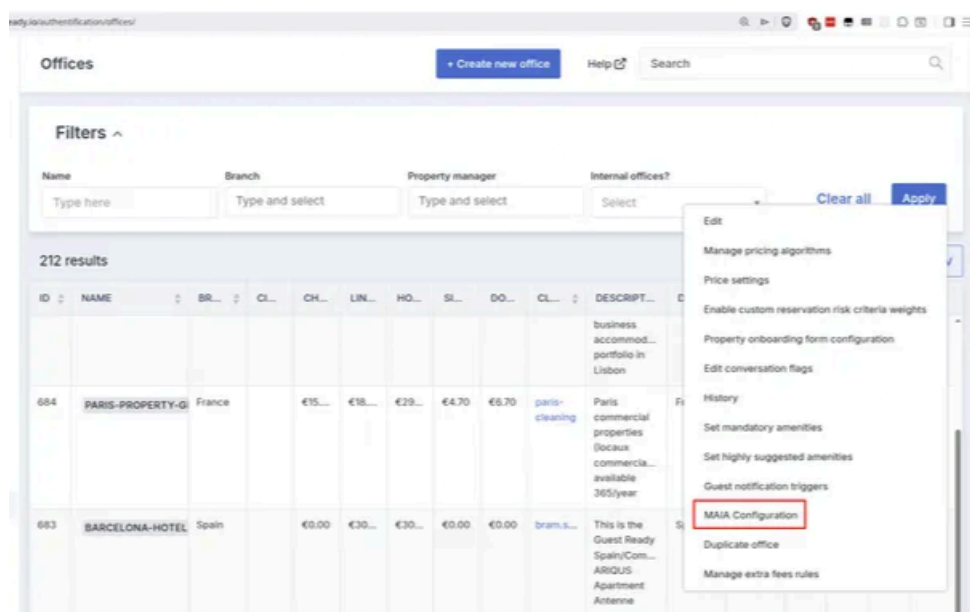

- Now, if Maia detects that the guest message is in Portuguese, and she cannot determine that it is in Brazilian Portuguese, she will default to responding in European Portuguese.

3. Maia bug fix: closing conversations

- There was a bug in Maia's logic where she incorrectly closed conversations without replying.
- We have a check that determines whether or not Maia should reply to the guest's message. If the guest sends a message like "OK" or "Thanks", then Maia will decide not to reply.
- Due to this bug, if the guest wrote "OK" or "Thanks" anywhere in their message, then Maia would sometimes incorrectly close the conversation without replying.
- We have deployed a fix to prevent this from happening, so that Maia will only close the conversation if the guest's message consists entirely of only text like "OK" or "Thanks".

4. Old mailbox assistant configuration page removed

- There was an old, unmaintained mailbox assistant configuration page accessible from the actions drop-down menu on the offices list view.
- This link has been updated to go to the current mailbox assistant configuration view (the same one which is accessible from the AI suite menu in the left navigation).
- The old mailbox assistant configuration view has been deleted.

5. Toggle mailbox assistant at the property level

- It is now possible to toggle the mailbox assistant at the property level.
- In the mailbox assistant configuration, you can enable Maia on all properties or on specific properties.

- If you select all properties, then you can specify a list of properties on which to disable Maia and Maia will be automatically enabled on all new properties in the associated offices.
- If you select specific properties, then you can specify a list of properties on which to enable Maia and Maia will be automatically disabled on all new properties in the associated offices.
- Note: after saving the form, the changes take a couple of seconds to take effect.

The screenshot shows the 'Mailbox assistant Maia' settings page. At the top, there is a 'Back' link and a 'Settings • Mailbox assistant Maia' header. Below this, there is a 'Help' link and a 'Search' bar. The main content area has a toggle for 'Enable Maia' which is turned on. Below the toggle, there is a section for 'Offices' with a list of three offices. Underneath, there is a 'Properties' section with two radio buttons: 'All' (selected) and 'Specific'. A red box highlights the 'All' radio button and the text 'All new active properties will be automatically connected'. Below this, there is a 'Select properties to exclude' section with a list of three properties. At the bottom, there is a section for 'Assist in the following message categories' with two columns: 'Training' and 'Direct message'. Under 'Training', there are three radio buttons: 'Pre-approvals' (selected), 'Ongoing reservations', and 'Future reservations'. Under 'Direct message', there are three radio buttons: 'Pre-approvals', 'Ongoing reservations', and 'Future reservations'.

Pricing

1. More Intuitive Platform Markup Input

We've updated the Platform Markup field to use a more intuitive integer scale (0–200), making it easier to understand and configure markup percentages for your properties.

What changed?

We now handle 200% markup, as requested by Revenue Managers. Previously, markup values were displayed as decimals (0.01–1.00), which could be confusing when trying to set percentage-based markups.

Now, the markup field uses a straightforward integer scale that directly represents percentages:

- Before: Entering `0.15` to set a 15% markup
- After: Simply enter `15` to set a 15% markup

This enhancement applies to:

- Markup settings at the property manager platform level
- Markup settings in the Rental Form → Price tab

2. Markup update:

- Negative markup is now supported, with a range from 100% to +200%.
- Warnings have been added to indicate which platforms have negative markup applied, helping prevent human error

3. Extra fee support on direct booking website

Extra fees can now be displayed and charged to guests who book via direct booking websites or the standalone booking widget.

- Extra fees can already be added on book.guestready.com from the rental form.
- For extra fees on direct booking websites, you must ask your account manager to activate them, before being able to set them up on rental form
- For now, extra fee amounts are not taken into account on the search page, they are only displayed once a guest selects a specific property and dates.

The screenshot shows a booking widget with the following details:

- Price: €88 / night
- Free cancellation policy up to 5 days before check-in date.
- Dates: 10 Feb → 14 Feb
- Guests: 1 Guest
- Book now button
- All fees are included. No registration required
- Price breakdown table:

Price for 4 nights	€352.00
Cleaning fee	€110.00
Environment fee	€900.00
Towel fee	€43.20
Crib fee	€80.00
Wood fee	€3.52
Total price	€1,488.72

+ Add discount voucher

Message us

Direct Booking Website

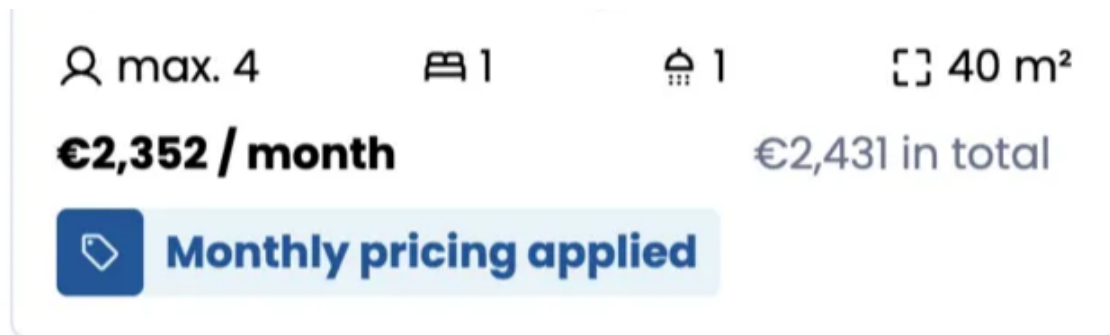

Display the monthly price in the search results instead of the nightly price

In the Direct Booking Website configuration form, you'll see the "Show monthly price in search results" option.

If you enable this option, all properties with "Monthly pricing applied" (there is a tag, too) will display the monthly price in the results instead of the nightly price.

☒ Show monthly price in search results

If enabled, properties with monthly pricing will display the monthly price instead of the nightly price in search results.

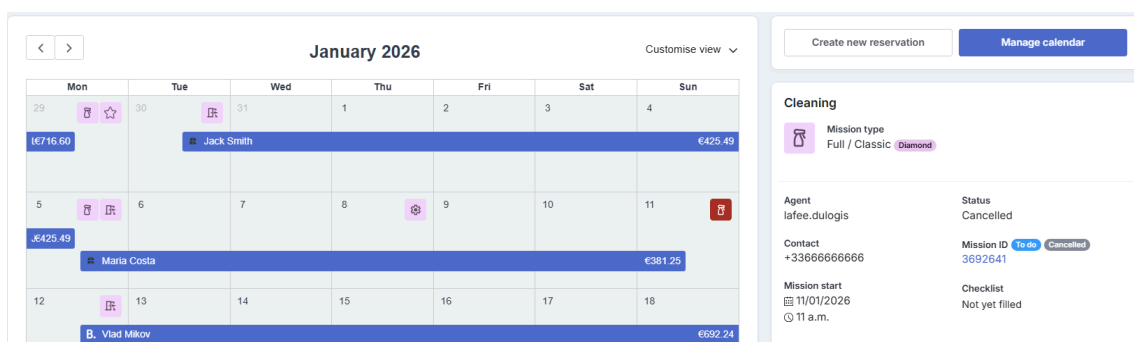

Property Calendar

Improved Mission Details Display in the Property Calendar

What's changed:

- Internal and external comments are now hidden when empty
- Mission badges are shown (To do, In progress, Done, Urgent, Cancelled)
- A check icon is displayed when the checklist has been submitted

Owner

AT Credentials Fields in Owner Onboarding Form

We've added the AT (HostKit) credentials fields to the owner onboarding form and made some naming changes.

What's new:

- Added "AT username" and "AT password" fields to the owner onboarding form
- Fields appear in a dedicated accordion section in the owner onboarding app (frontend)
- Fields are configurable per Property Manager in the onboarding form configuration page
- Fields only appear for PMs with HostKit invoice engine enabled
- Credentials are automatically saved to the HostKit system when owners submit the form
- Added help link to HostKit support documentation (opens in new tab)

Important naming change:

- All references to "HostKit" have been renamed to "AT" throughout the UI
- Owner edit page: "HostKit credentials" section → "AT credentials"
- Owner detail page: "Hostkit invoicing" → "AT invoicing"
- Field labels: "HostKit username/password" → "AT username/password"
- Help text now references "AT invoicing system"

Upcoming data migration:

After this release, we'll run a data migration that will automatically configure these fields

The image displays two screenshots of the owner onboarding form. The left screenshot shows the 'AT invoicing' section, which includes a link to 'How to create AT account', input fields for 'AT Username' and 'AT Password', and buttons for 'Enregistrer pour plus tard' and 'Envoyer'. The right screenshot shows the 'AT credentials' section, featuring input fields for 'AT username' and 'AT password', with descriptive text below them: 'Username for AT invoicing system' and 'Password for AT invoicing system'.

Pre Check-in Form

Check-in Instructions Timing Fix

We fixed the check-in instructions sending time displayed on the pre check-in form.

Previously, the message always showed a fixed value of 48 hours. Now, the message uses the actual configured value.

Check-in from 15:00

On your arrival day, the property will be prepared for you from 15:00. The check-in instructions will be sent to you 3 days before your arrival.

RentalReady Applications

1. RentalReady PMS app: We enabled the top bar on the pages for the mobile apps!

Now you can access some links and actions located in the top bar of the page from your mobile app (go to mailbox, edit, options).

2. Owner app: v5.4.2 (iOS & Android)

We've created a new *5.4.2 release* for both iOS and Android.

Technically, this update is required for Android only (to comply with the new *16KB page size requirement), but we aligned versions across platforms for consistency.

You can now update to the latest version of the application.

What's new?

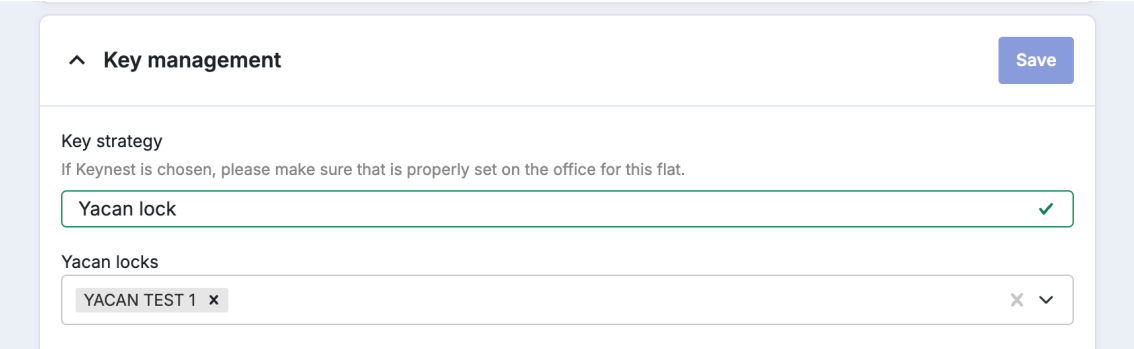

Navigation improvements

- Removed the legacy Accounting tab
- Accounting section (previously beta) is now fully available
- Added a new Reservations page to manage bookings Technical upgrades
- Expo 52 → 53
- React Native 0.76 → 0.79

Integration

Yacan integration

We're happy to announce a new integration with a smart lock solution called Yaca

The screenshot shows a 'Key management' interface. At the top, there's a header with a chevron icon and the text 'Key management', and a 'Save' button on the right. Below the header, there's a section titled 'Key strategy' with a note: 'If Keynest is chosen, please make sure that is properly set on the office for this flat.' Under this, there's a text input field containing 'Yacan lock' with a green checkmark on the right. Below that, there's a section titled 'Yacan locks' with a list of locks. The first lock is 'YACAN TEST 1' with a close icon (x) and a dropdown arrow (v) on the right.
